

Preserving Our Homeland - Our Nation - Our Environment

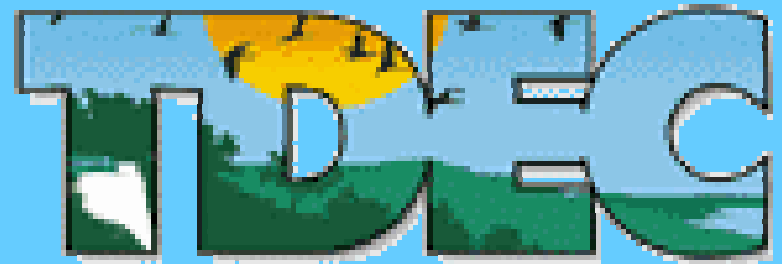

Clint Willer
Director, Federal
Programs

Formally Used Defense Sites (FUDS)

Scope of the Problem

- **67 + sites identified in Tennessee**
- **USACE has spent just over \$6 million on the program in Tennessee since 1984**
- **Average funding level for past 17 years has been approximately \$350 K per year**
- **USACE Cost estimate to complete cleanup at Tennessee sites is \$218 M**
- **FY 02 Budget is \$1.2 M**

The Challenge

- At the historical funding level it will take over 620 years to clean up these sites
- If the DOD FY 02 funding level is maintained it will take 180 years
- Nine (9) sites in Tennessee have potential OEW concerns
- A young boy lost his right hand from handling UXO removed from one of these sites

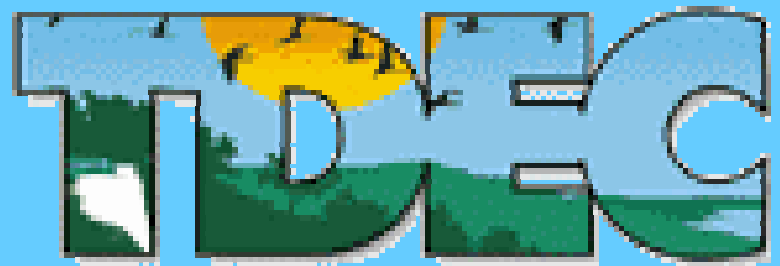

The Challenge (cont.)

- **Little coordination between USACE and TDEC**
- **Current DSMOA Funding will not provide for timely review of historical Inventory Project Reports (INPRs)**
- **Proposed management improvements by USACE will do little to improve the program without additional funding**

The Solution

- **DOD seek adequate funding from Congress to address FUDS requirements**
- **Prioritize cleanup of OEW sites**
- **Coordinate efforts with the States and EPA Regions**
- **Implement institutional controls/engineering controls at OEW impacted sites as a priority effort**
